Printing tips

representative sample of the civilian noninstitutionalized population of the United States a can be used to make estimates of prescribed medicine utilization and expenditures for cale year 1997. Each record represents one household-reported prescribed medicine that was purchased or obtained during calendar year 1997. These data were collected during the 1997 portion of Round 3, and Rounds 4 and 5 for Panel 1, as well as Rounds 1, 2 and the 1997 portion of Round 3 for Panel 2. Each record on this event file represents a unique prescribed medicine event; that is, a prescribed medicine reported as being purchased or otherwise obtained by the household respondent, and includes the following: an identifier for each unique prescribed medicine; detailed characteristics associated with the event (e.g., national drug code (NDC), medicine name, etc.); conditions, if any, associated with the medicine; the date on which the person first used the medicine; total expenditure and sources of payments; types of pharmacies that filled the household's prescriptions; whether the prescription is one in which the household received a free sample of it during the round; and a full-year person-level weight.

For more information, see MEPS HC-029: 1997 MEPS HC Survey Data.

A problem was discovered with the linking between the MEPS Prescribed Medicines files and the Cerner Multum file that resulted in some incorrect therapeutic classes being assigned. The Multum Lexicon Addendum files (HC-068) contain the corrected therapeutic classes. Analysts should use caution when using the Cerner Multum therapeutic class variables for analysis and should always check for accuracy, because the Multum classification has been changed by the addition of new classes and subclasses, and by changes in the hierarchy of classes. See the documentation for the Multum Lexicon Addendum files for examples.

The Multum Lexicon Addendum files (HC-068) also contain an additional variable not in the 1996 through 2012 MEPS Prescribed Medicines files: the generic name of the drug most commonly used by prescribing physicians.

Readme file Update notes

Documentation	File type
Documentation	<u>PDF</u> (100 кв) / <u>HTML</u>
Codebook	<u>PDF</u> (24 кв) / <u>HTML</u> *
SAS Programming Statements	<u>ТХТ</u> (23 КВ)
SPSS Programming Statements	<u>ТХТ</u> (12 КВ)
STATA Programming Statements	<u>ТХТ</u> (16 КВ)
Data	File type**
Data File, ASCII format	ZIP (5.4 MB) / EXE (5.4 MB)

Questionnaires – see Survey Questionnaires

Data File, SAS transport format

*The PDF version of the codebook is recommended for printing; the HTML version is database driven and lets you navigate quickly to details on each variable.

<u>ZIP</u> (6.1 MB) / <u>EXE</u> (6.2 MB)
