## MEPS HC-051A: 2000 Prescribed Medicines File

Release date: April 2003

This file is one in a series of public use event files from the 2000 Medical Expenditure Panel Survey Household Component (MEPS HC) and Medical Provider Component (MPC). Released as an ASCII data file with SAS, SPSS, and STATA programming statements and in SAS transport format, this public use file provides detailed information on

- Notes on viewing and downloading files
- Printing tips

transport format, this public use file provides detailed information on household-reported prescribed medicines for a nationally representative sample of the civilian noninstitutionalized population of the United States and can be used to make estimates of prescribed medicine utilization and expenditures for calendar year 2000. Each record represents one household-reported prescribed medicine that was purchased or obtained during calendar year 2000. These data were collected during the 2000 portion of Round 3 and Rounds 4 and 5 for Panel 4, as well as Rounds 1, 2 and the 2000 portion of Round 3 for Panel 5 of the MEPS HC. Each record on this event file represents a unique prescribed medicine event; that is, a prescribed medicine reported as being purchased or otherwise obtained by the household respondent, and includes the following: an identifier for each unique prescribed medicine; detailed characteristics associated with the event (e.g., national drug code (NDC), medicine name, etc.); conditions, if any, associated with the medicine; the date on which the person first used the medicine; total expenditure and sources of payments; types of pharmacies that filled the household's prescriptions; and a full-year person level weight.

For more information, see MEPS HC-054: 1999 and 2000 MEPS HC Survey Data.

For more information, see MEPS HC-072: 2001 and 2002 MEPS HC Survey Data.

A problem was discovered with the linking between the MEPS Prescribed Medicines files and the Cerner Multum file that resulted in some incorrect therapeutic classes being assigned. The Multum Lexicon Addendum files (HC-068) contain the corrected therapeutic classes. Analysts should use caution when using the Cerner Multum therapeutic class variables for analysis and should always check for accuracy, because the Multum classification has been changed by the addition of new classes and subclasses, and by changes in the hierarchy of classes. See the documentation for the Multum Lexicon Addendum files for examples.

The Multum Lexicon Addendum files (HC-068) also contain an additional variable not in the 1996 through 2012 MEPS Prescribed Medicines files: the generic name of the drug most commonly used by prescribing physicians.

## Readme file Update notes

Documentation	File type
Documentation	PDF (349 KB) / HTML
Codebook	PDF (56 KB) / <u>HTML</u> *
SAS Programming Statements	<u>TXT</u> (22 KB)
SPSS Programming Statements	<u>TXT</u> (9.8 KB)
STATA Programming Statements	<u>TXT</u> (13 KB)
Data	File type**
Data File, ASCII format	<u>ZIP</u> (4.1 MB) / <u>EXE</u> (4.1 MB)

## **Questionnaires** — see **Survey Questionnaires**

Data File, SAS transport format

ZIP (5.2 MB) / EXE (4.8 MB)

<sup>\*</sup>The PDF version of the codebook is recommended for printing; the HTML version is database driven and lets you navigate quickly to details on each variable.

<sup>\*\*</sup>Right-click on the data file link, then select Save Target As or Save Link As to download the file.
